## ABSTRACT

This study was conducted at McNester Food Products from June 2010 to March 2011 to determine the problems that had been encountered by the business which deals about their manual system. Their manual inventory of finished products, the way they process their day-to-day sales, unorganized information because of their current system

The system will help the business to have a Material Resource Planning that will automate their transactions in their Inventory, Point of Sale, Production of Products, cater orders through SMS, generating Product, Raw, Sales, Booking and Best Selling Products.

The researchers used Visual Studio as front end and MySQL as a back end. The result shows that Material Resource Planning made all transactions faster in facing the everyday routines of the business and it is advantageous to the owner and the staff side.
