## **ABSTRACT**

The proposed system is a dynamic website which features teacher's assistant, alumni tracking, forum, and personal messaging. The scope of this thesis are teachers, students, alumni and guests.

These new features of the system will allow College of Computer Studies (CCS) students and teachers' interaction, tracking of CCS alumni, easier and more efficient. Web users are only allowed to view the main page.

The researchers used SDLC model which guided the software development process and prescribes various documents and deliverables for each phase.

This study was undertaken to solve the problem of the existing website. It is recommended that the system should be implemented for the benefit of the college.
