A STUDY ON THE IMPROVEMENT OF POTABLE  
WATER SUPPLY SYSTEM IN SITIO PARADAHAN  
BARANGAY TOYUNGAN, CALINOG, ILOILO

By: BONIFACIO V. MAMON

**ABSTRACT**

This study is conducted because of the need to know whether it is feasible to upgrade the system from level 2 to level 3. The study is limited only to the technical feasibility. Financial and economic viability were not considered. The present demand is projected to fifteen (15) years and the supply is evaluated whether it can cater the demand. The existing facilities are also examined whether it can be utilized for upgrading the system. Hydraulic principles and formulas are used in the design and computations of the data.
